IMPORTANT STEP TO FOLLOW

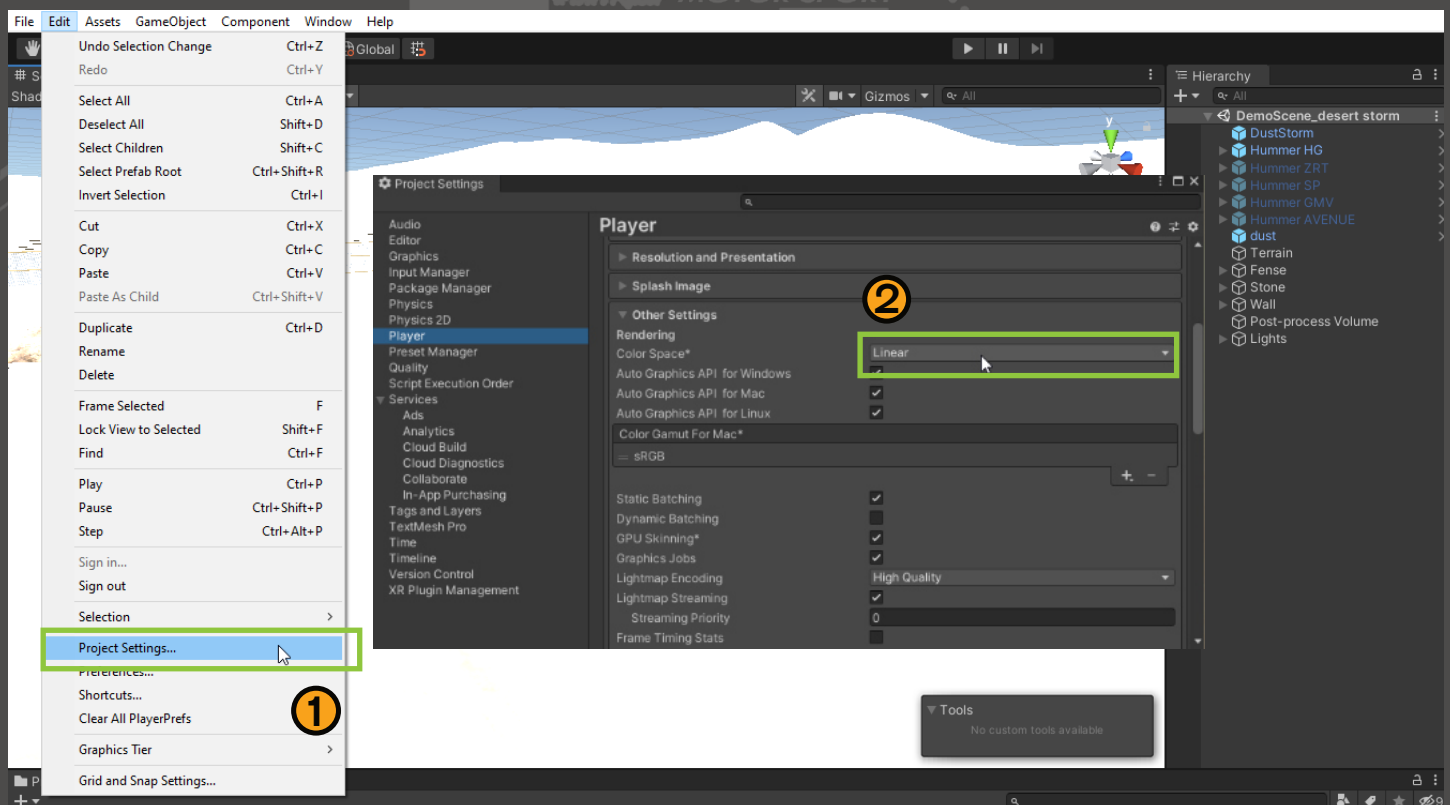

LIGHT SETTING & ADDING DEPENDENCIES

After you imported the asset to your scene, you must follow this steps to achieve better lighting, for the lights to work properly as shown in our demo video.

➔ STEP 1

First import the asset to your scene and set Color Space to 'Linear'

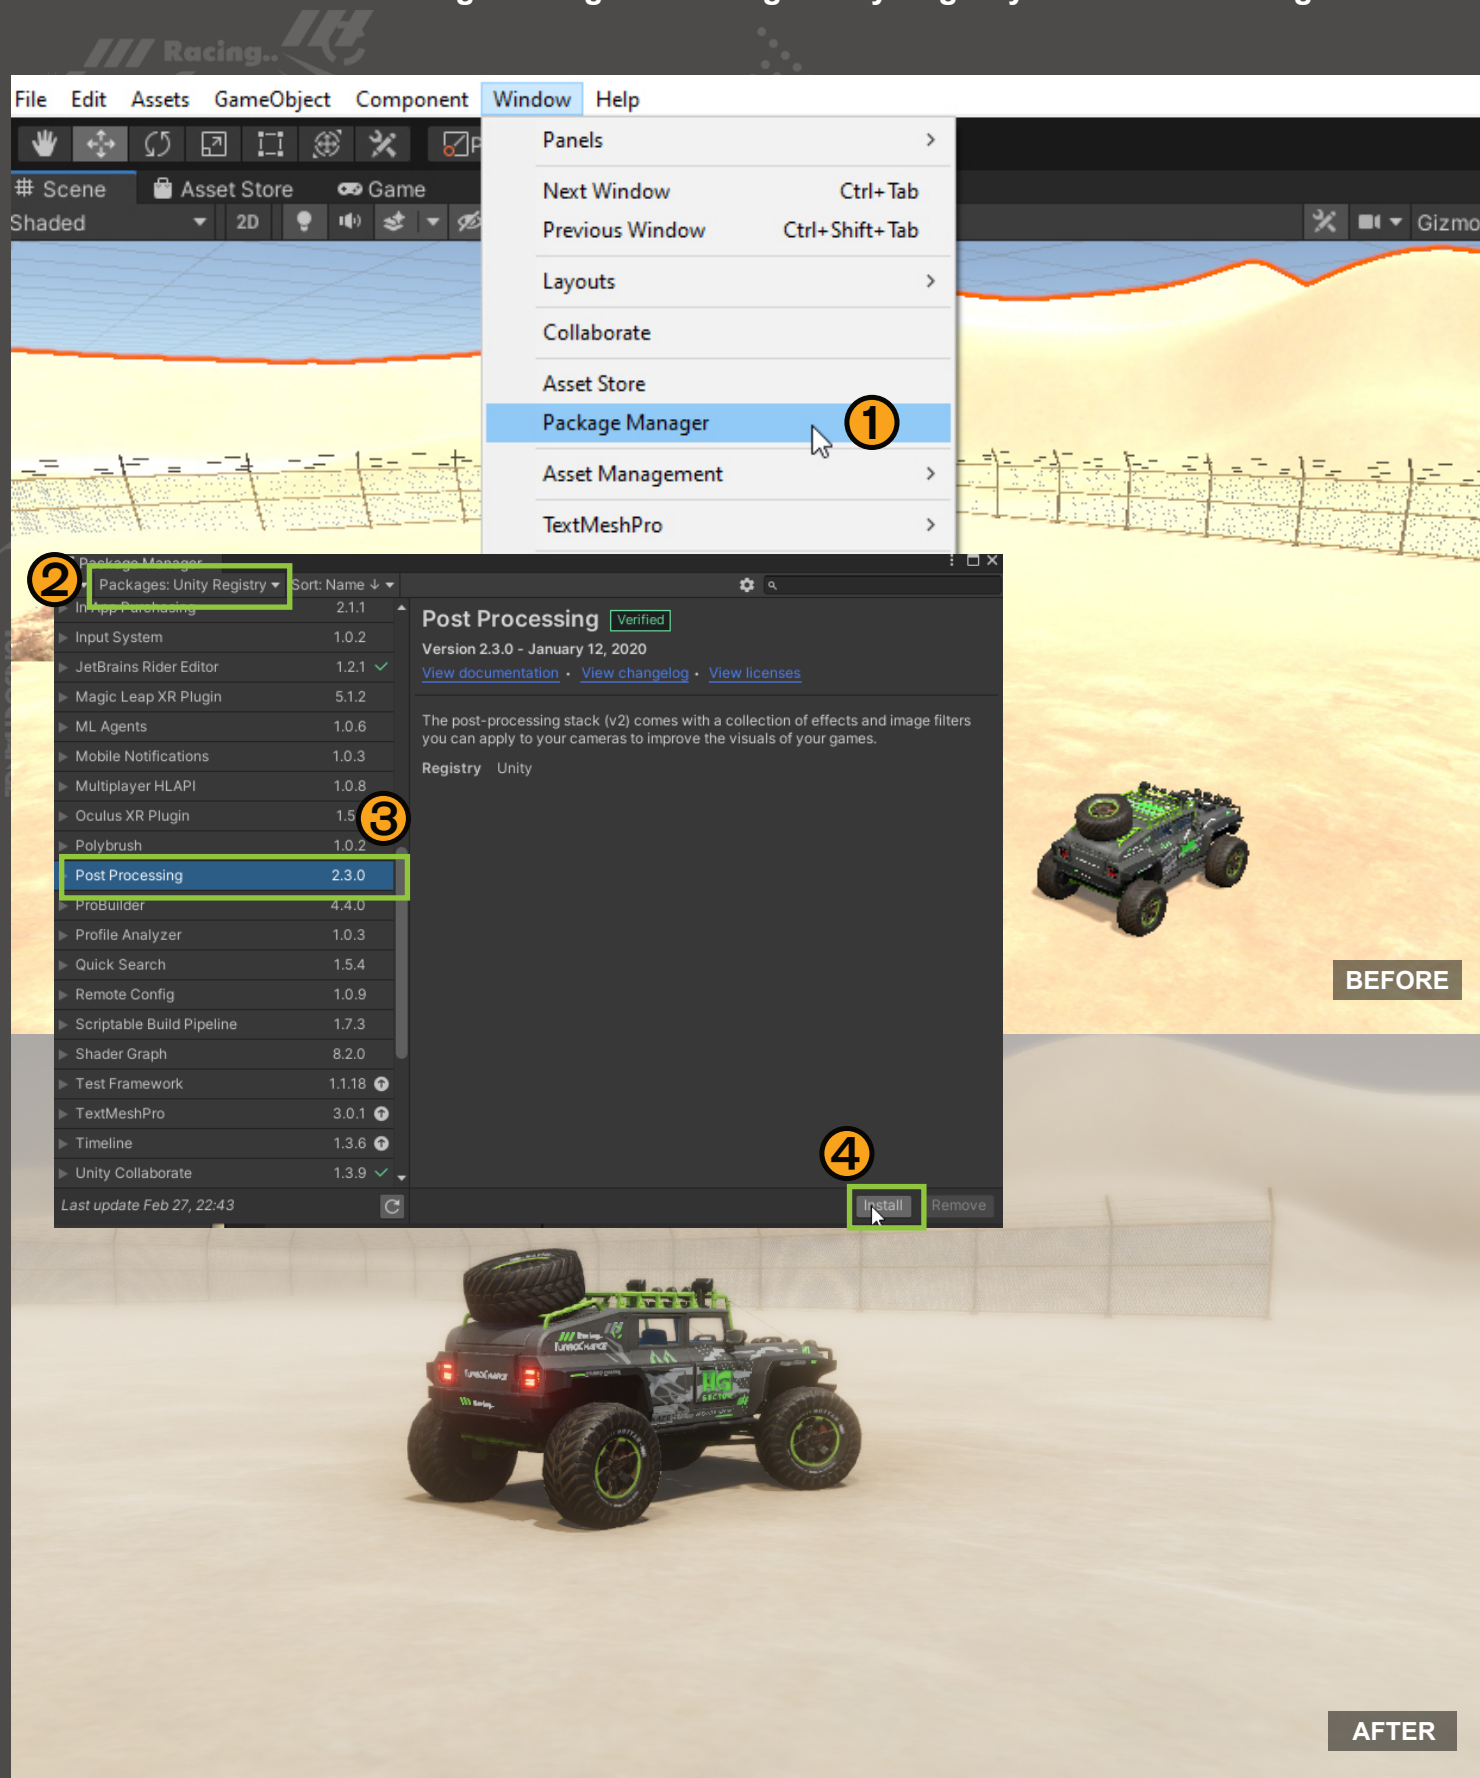

Goto: Edit > Project Setting > Player > Color Space > Linear

➔ STEP 2

Install Post Processing from the package manager

Go to: Window > Package Manager > Package Unity Registry > Post Processing > Install
